Description What is the purpose of specifying storescp's own AE title (with option "-aet"), when this tool always responds with the name it was called with? The same applies to demrecv. Perhaps, the behavior of these tools should be revised (with the default behavior being the same as it is currently). A new option could e.g. enable the respective tool to check whether the AE title it was called with is really correct (e.g. STORESCP or DCMRECV).
