

DICOMscope - Bug #1042

Graphic overlays displayed with offset

2022-10-14 18:01 - Marco Eichelberg

| Description <p>DICOMscope apparently applies an offset when displaying graphic overlays with PIXEL coordinates. The lines of the GSPS should exactly match the grid in the underlying image, but they do not, and the offset seems to change when the image is rotated. This is probably a bug in the Java code.</p> <p>Bug report and sample files provided by Sean Doyle <sdoyle@hyperfine.io> in the DCMTK forum, https://forum.dcmkt.org/viewtopic.php?f=5&t=5209.</p> | | | |
