

DCMTK - Feature #1044

Networking tools should log details on association negotiation profiles and config files that are used

2022-11-11 11:19 - Jörg Riesmeier

Description Currently, the networking tools storescu, storescu and the like do not show any information to the logger about the configuration file that is loaded using option --config-file. Similar to the message "D: DcmDataDictionary: Loading file: ~/dcmtd/dcmdata/data/dicom.dic" the name of the config file should be printed to the DEBUG logger, plus the name of the selected profile. There should probably also be an option (e.g. --dump-config-file) that shows the content of the configuration file (using DcmAssociationConfiguration::dumpProfiles()). Of course, this also applies to the C++ classes DcmSCU and DcmSCP.
