

DCMTK - Feature #1057

Doxygen @copydoc usage should refer to parent class

**Description**

In some places, DCMTK API doxygen documentation uses @copydoc to reference documentation from classes the current class is inherited from.

In some cases, @copydoc currently refers to some "root" class (i.e. a class at the top or multiple levels above the current class in the inheritance hierarchy) instead of the direct parent base class.

If @copydoc is used, we prefer in DCMTK to only reference the direct base class, not higher levels in the hierarchy.
