

DCMTK - Bug #1122

movescu's --bit-preserving option is not respecting the --output-directory option

2024-05-03 18:27 - Jörg Riesmeier

Status:	Closed	Start date:	2024-05-03
Priority:	Normal	Due date:	
Assignee:		% Done:	100%
Category:	Application	Estimated time:	0:00 hour
Target version:	3.6.9	Compiler:	
Module:	dcmnet		
Operating System:			
Description Currently, movescu's --output-directory option is ignored for creating output files when the bit-preserving mode (+B or --bit-preserving) is used. That means the file is always written to the current working directory, which is not expected by the user and also not intended. This issue has been reported by Luis Miguel Santos < luis.santos2@nih.gov >.			

History

- #1 - 2024-05-03 18:27 - Jörg Riesmeier
 - Subject changed from movescu's bit-preserving option is not respecting the --output-directory option to movescu's --bit-preserving option is not respecting the --output-directory option
 - Description updated
- #2 - 2024-05-07 12:38 - Marco Eichelberg

This issue should also be checked in the tools getscu , storescp and dcmrecv , which all support the options "--bit-preserving" and "--output-directory".
- #3 - 2024-05-23 16:18 - Jörg Riesmeier

The tools getscu (based on DcmSCU) and dcmrecv (based on DcmStorageSCP) are not affected by this issues.
- #4 - 2024-08-15 00:12 - Jörg Riesmeier
