

DCMTK - Bug #1147

Some Association Acceptors do not output "Responding Application Name" to logger

2025-01-23 13:08 - Jörg Riesmeier

Status:	New	Start date:	2025-01-23
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Library and Apps	Estimated time:	0:00 hour
Target version:		Compiler:	
Module:	dcmwlm, dcmqrdb, (dcmnet)		
Operating System:			
Description Some DCMTK tools that implement an Association Acceptor, e.g. wlmcpfs and dcmqrscp, print an empty value for the "Responding Application Name" in the "A-ASSOCIATE-AC" part of the debug output. Other tools, such as storescp and dcmrcv, output a non-empty value, which is identical to the Called AE Title (if not checked or the same value is configured locally, see command line options). It should be checked why wlmcpfs and dcmqrscp behave differently and how the missing output can be added.
