| <p>A <a href="#">user on StackOverflow</a> suggested code that allows getting a tag path (as understood by the given class DcmPathProcessor that power for example dcmodify) for a given DcmElement.</p> <p>It could be interesting to review and take over this functionality into DcmPathProcessor or a related class.</p> |               |                        |            |
