Description

<http://forum.dcmtdk.org/viewtopic.php?t=2064>

i tried this with two versions, with the same result (segfault).
here are the respective dcmprscp --version outputs:

a)version 3.5.4 (current stable), normal build without options (other than a custom install path prefix):
\$dcmtdk: dcmprscp v3.5.4 2005-12-20 \$

Forum user "parigaud" wrote:

dcmprscp: DICOM basic grayscale print management SCP

Host type: i686-pc-linux-gnu

External libraries used:
- ZLIB, Version 1.2.3
- OpenSSL 0.9.8h 28 May 2008

b) snapshot from 20090507, built with debug enabled (and a custom install prefix):
DcmDataDictionary: Loading file:
/my_install_path/lib/dcmtdk_20090507_debug/share/dcmtdk/dicom.dic
\$dcmtdk: dcmprscp v3.5.4+ 2009-05-07 \$

dcmprscp: DICOM basic grayscale print management SCP

Host type: i686-pc-linux-gnu

External libraries used:
- ZLIB, Version 1.2.3
- OpenSSL 0.9.8h 28 May 2008

both the stable and the snapshot were built under linux (opensuse 11.1) with gnu c++:
g++ (SUSE Linux) 4.3.2 [gcc-4_3-branch revision 141291]
