

## DCMTK - Feature #253

### Erweiterung von dcm2pnm um DICOM SC als Ausgabeformat

2006-09-28 00:00 - Marco Eichelberg

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |                        |           |

| <p>When I use dcmj2pnm I can use Overlayparameters, so that the resulting image has Overlay data included. Is there a chance or a tool that converts a dcm to a dcm (not png, tiff or jpg etc) where Overlay data is integrated in the pixel data?<br/>I'm using ImageJ as dicomViewer and ImageJ doesn't support (6000,3000) tag for Overlay data.</p> <p>-&gt; Es könnte interessant sein, dcm2pnm eine Option zu verpassen, bei der die erzeugte Bitmap (ggf. mit wählbarer Bittiefe) als DICOM Secondary Capture rausgeschrieben wird, wobei man ja Patient IE und Study IE from Quellbild übernehmen könnte.</p> |          |                        |           |
