Target version:				
Module:	dcmqrdb		**Compiler:**	
Operating System:				

Description

"Reports of memory leaks in the DcmQueryRetrieveConfig class, and after reviewing they seem founded, as memory allocated by the readAETable method for example is never freed (the CNF_Config member)." See [[http://forum.dcmtk.org/viewtopic.php?p=12566#12566|forum entry by st80rules]]
