

DCMTK - Feature #555

Add getSpecificCharacterSet() method to DcmElement / DcmObject

2013-10-03 18:07 - Jörg Riesmeier

Target version:		Compiler:	
Module:	dcmdata		
Operating System:			
Description This new method should first search on the current dataset/item-level for the element (0008,0005) SpecificCharacterSet. If not found, it should continue on the next upper level, using getParent() or getParentItem()... It would probably be the most flexible solution to let getSpecificCharacterSet() return a C string or OFString with the complete element value.
