

DCMTK - Feature #901

Add option to disable all external packages during configure

2019-10-11 17:34 - Jörg Riesmeier

Status:	New	Start date:	2019-10-11

Module:	config, CMake		
Operating System:			
Description By default, all external packages (such as zlib or OpenSSL) are enabled if found on the system. Currently, one has to disable all external packages manually using the appropriate --without-xxx option. It would be nice to have a new configure option --without-packages that disables all external packages.
