Description

Currently, findscu (and other networking tools) do not allow for proposing Explicit and Implicit VR Little Endian Transfer Syntax only, i.e. it is currently not possible to avoid the retired Transfer Syntax Explicit VR Big Endian. For this purpose, a new (or a couple of new) command line option(s) should be introduced. For example, an option --propose-retired could be introduced, which explicitly enables retired Transfer Syntaxes such as Explicit VR Big Endian (default would be "off", i.e. "--no-retired").
