Module:	dcmdata		
Operating System:			
Description <p>xml2dcm currently always ignores errors in the XML input file and tries to create the DICOM output file anyway. Similar to dump2dcm, xml2dcm should offer the following options:</p> <pre>error handling: -E --stop-on-error do not write if dump is damaged (default) +E --ignore-errors attempt to write even if dump is damaged</pre>			

History
