Description Mathieu Malaterre writes: The output of dcm2json cannot be fed to a BSON pipeline. BSON is more rich on data types (is binary just like DICOM), so I cannot pass the "Value" field of an IS or DS element without first checking if this is properly encoded as string. Would you then consider the following new behavior(s): 1. a new cmd line option to quote is/ds always: --always-quote-is-ds (I have no intention ever to use that one...) 2. new behavior: return EXIT_FAILURE upon first failure of checkStringValue (I may use this one...)
